Project 2: Research Topics

Topic: Evolution of Female Rappers

I want to highlight and explore the history of women in hip-hop. I would focus in on the timeline of rappers, each rapper's history, and best hits from each rapper. Each of those subjects would be a page on the website to further learn about. In addition to those topics/pages, I would have a home page and a contact page. My audience would be people who are interested in the evolution of hip-hop and people who want to highlight women in a field where it is dominated by men. Since this topic has a heavy presence of different women and information, it is important to design this website with organization, legibility, and good aesthetic. I would make a logo for this website to give it uniqueness while also incorporating images from the web to show who each artist is. I will also add in small graphics/illustrations to make the website more fun and attracting.

I want this website to be very easy for users to navigate, so I will have an easy navigation system. I will set up the website with pages at the top of each page to keep consistency. I will also have links to other pages at the footer of each page to have another way of navigating. I will use a color scheme that is neutral so that photos and illustrations will pop out. Overall, this website will have easy navigation while also keeping a cool theme.
