Design for the WWW II

Ryan T Smith

Project 3

My project 3 will be an artist website about myself. My audience for the website would be people, specifically employers interested in my art work. The website will be showcasing 7 of my Graphic Design artworks I have created through my years in college.

How I would design my website is by having three different sections. The first section would be an about me page. The section will be a third person narration on my life and my goals as an artist. The second section would be a gallery page. The gallery will have my Graphic Design artwork with a description under it. There will also be a gallery slide that can direct the user to certain artworks. The third section would be a contact page, where people can try to contact me. How I would make this website is by modifying a bootstrap template. The color scheme of the website would be cool colors like blue and black The title font would be Bebas Neue, while the smaller text font would be Abel font.
