

For my third project, I will be extending a project I am working on in GD3 right now. This project focuses on the branding and design of a made up restaurant that I have named Celestia. This restaurant is astrology and zodiac themed, offering an engaging menu that considers your zodiac sign and best suggested meal based on your personality. The colors of this website will feature a dark blue/purple- still deciding, as well as classic gemstone colors such as ruby, sapphire and emerald. The website will have a home page, about page, menu page, your sign page and a reservation page. This website will immerse you into the space atmosphere and teach those who know and do not know more about the new age of astrology and astrological signs based on the Greek gods. This website will mimic the classy michelin star atmosphere it captures in person.
