

## **Project Proposal**

For my research website I want to create an astronomy site. I am taking a class on the subject now and am really enjoying it. I want to make it for beginners in astronomy. It will have the basics like the celestial sphere, the moon, and the stars. I will also have a page that will be for attending classes. I want the color scheme to be blues and purples. I will have a background image of space.

I will have a lot of pictures because I think it helps to visually see things. The photographs from space are really pretty and I think they will enhance my website. I want to create a logo for the navigation bar. I want the logo to have something to do with space. The name will be “Starry Insights” so maybe add some stars into the logo. I might also add in some videos to help people better understand the topic.
