Spring 2011
Class: MW 5:00 – 6:15
Room: YR 405
Section: 101
Office Hours: M 3:00 – 4:00
& by appointment

Prerequisites: COSC 440 and COSC 450

Catalog Description: An in depth study of the practical aspects of computer security, including the study of common computer security vulnerabilities in a laboratory setting.

Course Objectives: Upon completing the course, students will be proficient with the core hands-on elements of computer security. In particular, students will be able to set up and securely manage common services, and will be able to manage common defensive measures including log servers, intrusion detection systems and firewalls.

Course Outline: The class will consist primarily of hands-on laboratory exercises in computer security; these will be supplemented by lectures and readings.

- Introduction to Backtrack 4; common offensive tools.
- Setting up a DNS infrastructure.
- Linux servers; Logging and SSH. Cross-platform logging.
- Exercise 1.
- Web Servers, IIS and Apache. Set up, configuration, and logging. HTTP and HTTPS. Password protected directories.
- Exercise 2.
- Other services, both common and uncommon. SNMP. Databases; MySQL.
- Intrusion detection systems; Snort.
- Exercise 3.
- Firewalls; NAT & PAT. IPCop.
- Exercise 4.

Attendance: Attendance is expected; you should only miss a class for a compelling reason. If you do miss a class, you are responsible for any material that you miss, including any homework assignments given in that class. Unexcused absences can result in a lower grade.

Students should not attend classes or other university events from the onset of flu-like symptoms until at least 24 hours after the fever subsides without the use of fever reducing medications.
Such absences will be considered excused absences; however, students are responsible for the material covered during the period of their absence.

**Grading:** Students will be evaluated on the basis of four hands-on exercises. The final grade will be the average of the grades received on the four exercises, with the final exercise counting double.

**Academic Integrity:** The nature of this course requires that students adhere to accepted standards of academic integrity. Violations of academic integrity include cheating, plagiarism, falsification and fabrication, complicity in academic dishonesty, personal misrepresentation and proxy, bribes, favors and threats. Cheating is a serious offense that will have grave consequences for your academic life.

Students who violate these standards will either fail the course outright or, at the instructor's discretion, may merely receive a zero on any assignment for which the student receives inappropriate assistance. Violations of these standards will be referred to the administration for possible additional action.

Students are reminded that they must follow the University Guidelines for Responsible Computing [http://www.towson.edu/adminfinance/ots/aboutots/otspolicies/responsible.asp](http://www.towson.edu/adminfinance/ots/aboutots/otspolicies/responsible.asp).

**University Policies:** Students are reminded that may not repeat a course more than once without prior permission of the Academic Standards Committee.

**Final Exam:** The final exam time for this class is Wednesday, May 18 from 5:15 until 7:15. This time will be used for the in-class portion of the final project.

**Bibliography:** There are a number of books that cover various components important to this course, listed below are what I consider to be a few of the better choices listed in roughly the order the topics they cover appear in the class.

- Apache Security by Ivan Ristic, O'Reilly, 2005.
- Internet Information Services (IIS) 7.0 Resource Kit, Mike Volodarsky et. al., Microsoft Press, 2008.
