51. Write a PHP script that suffers from a cross-site scripting vulnerability caused by a user entering data in a form. Exploit the vulnerability to create a forged page using JavaScript.

52. Exploit the previous script in the same fashion, but without using JavaScript.

53. Modify the previous script so that it retains the same functionality, but no longer suffers from a cross site scripting flaw.

54. Write a PHP script that suffers from a cross-site scripting vulnerability that can be exploited by a malicious link. Exploit the vulnerability to show a forged web page.

55. Modify the previous script so that it retains the same functionality, but no longer suffers from a cross site scripting flaw.
