

Project 2 Overview

My Project 2 will be an interactive and educational website designed to teach children aged 6–12 about capybaras in a fun and engaging way. The site will feature colorful graphics and simple, easy-to-understand information to spark curiosity and help kids learn about capybaras' behavior, habitat, and role in the ecosystem.

I plan to create a logo that feels friendly and appealing to younger audiences. A colorful and playful design that emphasizes the cuteness of capybaras should work well.

For the interactive elements, I want the site to be easy for kids to navigate on their own while keeping it fun and engaging. Adding smooth transitions and playful animations will help make the experience more visually appealing. I also plan to use a mix of found images and my own illustrations to create a balanced and cohesive look.
